

201 Student and Graduate Opportunities

- ▶ Are you studying a science, agriculture or horticulture discipline?
 - ▶ Unsure of possible careers for your qualifications?
 - ▶ No experience, but interested in farming and agri-science?

Expand your horizons at NIAB

NIAB provides career and research opportunities for the next generation of crop scientists, agricultural advisors, technical specialists and trials operators.

We will have paid roles available between March - October 2011, ranging from four weeks to twelve months, based at our regional centres and in Cambridge.

Will Smith, Field Trials Manager

"Working to deliver research that feeds directly back to our farmer members, influencing their agronomic decisions, is an incredibly rewarding experience. As a former field trials officer I've appreciated the opportunity to move into a manager's role with NIAB encouraging continued professional development. I hope to be able to progress into research roles where I can use this experience and knowledge to improve the sustainability of future food production."

Jasper Despotter, PhD Student

"NIAB creates excellent opportunities for young scientists! I wanted to explore the world of plant/pathogen interactions as part of my PhD; NIAB's facilities and expertise allows me to combine field, glasshouse and molecular research. With such close connections to industry I can also see the impact and relevance of my research, motivating me to pursue a career in plant sciences."

Emily Borton, Trainee Regional Agronomist

"Working at NIAB TAG gives me the opportunity to meet a wide range of people throughout our industry, including farmers, technical specialists, agchem manufacturers, breeders and distributors. It is also a great opportunity to be involved in a technical crop specialist role without the isolation aspect usually associated with a conventional agronomist position. I hope to progress in my new role and build relationships with members to help NIAB TAG continue to provide a unique, farmer-focused service."
