 ME is calculated as D-value x 0.16

# = values are re-transformed from the mean of the log data#

Standing Power (1-9) has been calculated so that a variety that shows significantly more lodging than the mean of the 4 & 5 year varieties receives a score of less than 7.0.

Eyespot rating derived from inoculated nurseries rather than field scores

Standing Power (1-9) has been calculated so that a variety that shows significantly more lodging than the mean of the 4 & 5 year varieties receives a score of less than 7.0.

Eyespot rating derived from inoculated nurseries rather than field scores

On the 1-9 scales, high figures indicate that a variety shows the character to a high degree (e.g. high resistance)

ME is calculated as D-value x 0.16

# = values are re-transformed from the mean of the log data

Eyespot rating derived from inoculated nurseries rather than field scores

The varieties tabulated are forage maize varieties that the breeders have nominated as having potential suitability for AD use. The List may not represent the full range of forage maize or biogas varieties that are available for the market.
